"The Road to the ROD"

Operable Unit 1 (OU1) - The Former Export Plant

Previous "Road to the ROD" ads have introduced the Remedial Investigation (RI) and the Feasibility Study (FS). We have now reached the final stage of our journey to the ROD—the Proposed Plan.

EPA uses the RI/FS results, and all other information on the site, to propose a plan for cleanup over the long-term, including provisions for Operations and Maintenance of the remedy after EPA leaves town. The Proposed Plan for OU1 was mailed out to the entire community on September 8, 2009. This will be the start of the public comment period (September 9 to October 16, 2009).

EPA will present the highlights of the Proposed Plan at a public meeting and will also record any comments that the public wishes to provide at that time. Comments can also be mailed or e-mailed directly to EPA within the public comment period. Additional information on when and how to comment will be provided in the Proposed Plan, so watch your mailbox for your copy, or visit the EPA Information Center in Libby if you do not receive a copy in the mail.

Proposed Plan Public Meeting

September 28, 2009

7:00 to 9:00pm

The Little Theater

724 Louisiana Ave., Libby

Comment Period

on the Proposed Plan for OU 1

ends October 16, 2009

Libby Asbestos Superfund Site

Libby, Montana
